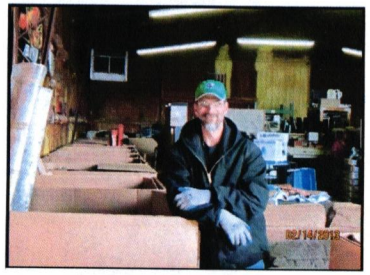
Our Services

R.O.M. has a goal of recycling, repairing, and reusing 100% of all materials collected. Functional items will be repaired, if necessary, and resold from our warehouse or donated to local charities. Other materials will be dismantled and sorted on site for recycling and reclamation. All activities are conducted in a safe, efficient, and contentious manner. We strive to be innovators and constantly are on the lookout for new materials, as well as for new ways to reuse, repurpose, and recycle.

We aim to help our clients avoid sending waste to landfill sites whenever practical and promote waste separation at the point of creation on all of our projects. We try whenever possible to collect individual waste streams and take them directly to recycling facilities. In conjunction with waste management services, we also offer organizational and clean up services for a reasonable fee.



Call Dennis for your recycling needs.

We make every effort to conduct salvage and recycling in an environmentally responsible manner and work closely with local governments and regulatory authorities to ensure compliance.

Acceptable Materials

R.O.M. accepts a wide variety of materials, including the following examples:

About Us

Founded in 2002, R.O.M. is owned by Dennis Kalco. The company has grown from a weekend hobby based on a simple passion for environmental preservation to a full time local business.

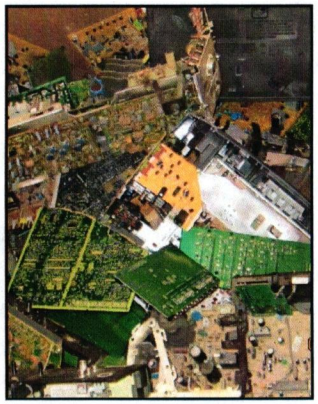
Our approach to recycling is based on basic principles of economic and environmental sustainability. Off site and in the office we also encourage our employees to dispose of waste correctly. We are committed to developing our recycling and environmental policies in order to further reduce the production of waste through good working practice, economic recycling or reuse.

Our recycling policy has the following specific aims:

- Facilitate waste minimization & recycling
- Promote economy in the use of paper & other consumables
- Encourage the purchase of recycled & recyclable materials
- Favor businesses with sound environmental principles & positive recycling & waste management practices

Our Mission

Our goal is to lessen the impact that our communities are having on our natural environment. By recycling, restoring, and reusing materials, we are minimizing landfill usage while preserving and protecting natural resources.



Circuit boards awaiting recycling.

We are dedicated not only to environmental protection, but also to helping out our fellow citizens. Many quality materials are donated to local homeless shelters, Habitat for Humanity, and other organizations benefiting our neighbors in need.

No job is too big or too small. We have a drop box at our warehouse and offer free pick up within Southeast Idaho and Western Wyoming. If you're not sure if we'll take it...or if you're looking for something particular...just call and ask us!
