

Minimize your sampling costs and time

To ensure that you receive credit for every sample submitted to your choice of laboratory, it is important that you give the lab the following information:

- Contact person's full name
- Contact person's telephone number
- Your public water system number (seven digit PWS #)
- Location of sample (Well #, Kitchen sink, wellhead, etc.)
- Be precise in naming what tests you would like the lab to complete (total coliform, nitrate, etc.)

Providing your lab with complete information and documentation is just as important as being careful during a sample collection process.

If your lab does not have all of the required information, it may not be able to complete the testing requirements needed for your system to receive credit for your sample and could also delay the time it takes to get to us at District Seven.

Please take the time to double-check all of your required information and if you have questions on filling out the required form from the lab, please call and we would be glad to help you with any of your concerns or questions.
